# What is the product?

- AI powered gifting and swag platform that helps sales, marketing teams build better relationships with prospects and customers
- Headquarters: Boston, MA

## **Products Offered:**

**Personal Gifting** - Physical & digital gift invitations

**Swag Select** - Includes Alyce branding on products offered

## How does it work?

Alyce takes a digital first approach to gifting

- First - choose which prospects to send a gift to
- Let the AI do the work to find the perfect gift for them
- Send your prospect a Gift Invitation that takes them to a branded landing page where they can choose to Accept the gift you sent, exchange it for another gift on the marketplace, or donate the dollar value to a charity of their choice.
- Once they've claimed their gift, they can validate which address they'd like it delivered to!

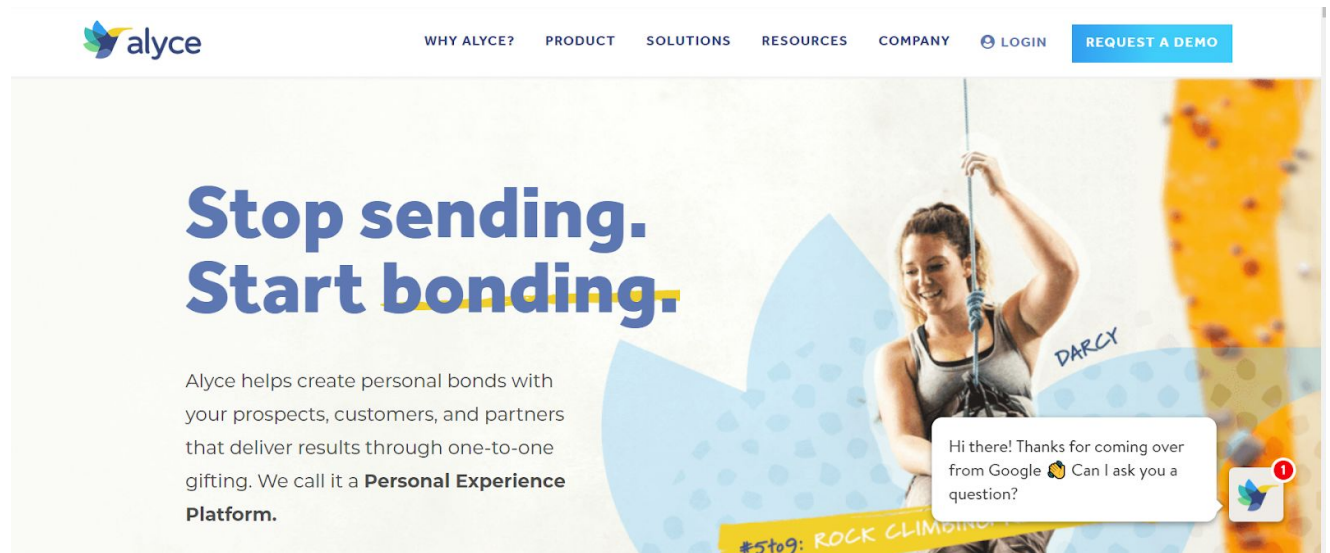

### Features:

- Curated Marketplace
- Gift tracking and Notifications
- Campaign budgeting
- Calendar integration
- Message templates
- Unlimited users

## How are they selling it?

### Online Website

Link to the website : <https://www.alyce.com/>

## How is it priced?

### Discount Pricing:

Discount pricing is one type of pricing strategy where you mark down the prices of your merchandise. The goal of a discount pricing strategy is to increase customer traffic and increase sales.

- Discounted invitations
- Heavily discounted invitations

### Captive Product Pricing:

Where products have complements, companies will charge a premium price since the consumer has no choice.

Pricing is offered depending on needs and how many gifts need to be sent at a given period of time.

The usual commitment starts at around \$50K annually

## What datasets do you think you will need to build these algorithmic services?

Dynamic, constantly updated datasets are required for long term oriented ML project. With data, the AI becomes better and in some cases like collaborative filtering, it is very valuable. Collaborative filtering makes suggestions based on the user interests, it will improve with access to more data.

### Customer Profile:

Name, email address, DOB, personal interest ( eg: sport of choice, reading, movies, etc)

### Product information:

Product information like Product ID, Description , Pricing, Image, inventory of the product. Several other data related to customer purchase and delivery.

## How frequently will data change?

The dataset for products will change constantly as new products will be added based on customer/prospect interests. The customer profile datasets largely depend on its interests. It would change in case customers show interests in other products affecting their search and recommendations largely. Apart from that, adding new customers to the dataset is another factor for data variation.

## How would you store these datasets?

**Databases: MySQL, Oracle, PostgreSQL, IBM DB2, Redis, Hbase, Hive, Apache Hadoop**

<b>MySQL</b> MySQL Database Service is a fully managed database service to deploy cloud-native applications using the world's most popular open source database.	<b>Oracle database</b> Oracle Database is the database designed for enterprise grid computing, the most flexible and cost effective way to manage information and applications.
<b>PostgreSQL</b> It is a highly stable database management system, which has contributed to its high levels of resilience, integrity, and correctness. PostgreSQL is used as the primary data store and analytics applications.	<b>IBM DB2</b> DB2 is a database product from IBM. It is a Relational Database Management System (RDBMS). DB2 is designed to store, analyze and retrieve the data efficiently.
<b>Redis</b> Redis is an open source (BSD licensed), in-memory data structure store, used as a database, cache and message broker.	<b>Hbase</b> Apache HBase™ is the Hadoop database, a distributed, scalable, big data store. It hosts very large tables on top of clusters of commodity hardware
<b>Apache Hadoop</b>	<b>Hive</b>

Apache Hadoop is an open source framework that is used to efficiently store and process large datasets ranging in size from gigabytes to petabytes of data.	Apache Hive is a data warehouse software project. Hive gives an SQL-like interface to query data stored in various databases and file systems that integrate with Hadoop.
---	---

Review the jobs/career site and search for Data/  
Data science positions, What technologies and  
programmatic services is the company using?

## **Positions Available:**

### **Data Science**

Director of Data Scientist, Data Scientist Lead

### **Digital Marketing**

Marketing Operations Manager, Director of Growth and Acquisition

### **Technology**

Application Support Engineer, Automation Engineer, Frontend Engineer, Backend Engineer

### **Sales**

Enterprise Account Manager, DevOps Lead

## **Technologies & Programmatic Services:**

Tracking data is important to see how trends change over time or why some users behave one way versus another. Understanding user engagement gives us the power to make smart products or better marketing decisions.

## Cookies

**Cookies** are most commonly **used to track users' activity on the website**. Servers can use **cookies** to provide personalized web pages

## Tracking pixels

Marketing **pixels**, also referred to as **tracking pixels**, are snippets of code that allow us to gather information about visitors on a website like how they browse, what type of products they click on, what are most frequently visited pages etc. This behavior data helps us to run several promotions on the specific product depending on user demand

## Tools used for Tracking

**Analytics Platforms** including Google Analytics, Hotjar, MouseStats, Segment, Facebook Pixel, Global Site Tag, Matomo are used on this website

These tools help tracking the following information:

- Measure online **traffic** - Track where the tracking is coming for
- Know exactly what your customers are looking for - **Pages** are the most **popular** among your visitors
- Tracking **Bounce Rate** - See where are you losing customers
- Optimizing and Tracking of Marketing **Campaigns**
- Finding the Right Target Audience and its Capitalization
- Improves and Optimizes Website and Web Services
- **Improve the results** from Google Ads and Facebook ads
- Tracking your website's **page views** shows how many people visit your site daily
